

Electronic Health Insurance Card

Your eGK – Whenever you go to the doctor, dentist or need hospital treatment, you must present your electronic health insurance card (eGK).

For what can I use the health insurance card?

You'll need the card to present it to your physician or dentist and anytime you visit the hospital. The eGK allows doctors to bill their services directly with the health insurance fund.

Be informed that each family member you have applied for insurance receives their own electronic health card (eGK).

Why do I need a picture?

You'll need it for a better identification with your electronic health insurance card - eGK (Children under 15 years don't need a picture yet).

Which data are stored on the card?

Only your Name, Address, Date of Birth and your health insurance number are stored on the card.

Do I have to carry the card with me at all times?

Yes! It's imperative to carry the card with you always. The doctor can refuse treatment without presenting the card. Your doctor needs the card for each visit with the aim of settling accounts with your health insurance company.
